## Application No. 10/027,877 Office Action Summary Examiner Jonathan ML Foreman -- The MAILING DATE of this communication appears on the cover sheet w Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 M THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a r after SIX (6) MONTHS from the mailing date of this communication. If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thir If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MON Failure to reply within the set or extended period for reply will, by statute, cause the application to become AE Any reply received by the Office later than three months after the mailing date of this communication, even if earned patent term adjustment. See 37 CFR 1.704(b). **Status** 1)🛛 Responsive to communication(s) filed on 17 May 2004. 2a) This action is FINAL. 2b) This action is non-final. Since this application is in condition for allowance except for formal mai closed in accordance with the practice under Ex parte Quayle, 1935 C. **Disposition of Claims** 4) Claim(s) 1-20 and 26 is/are pending in the application. 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration. 5) Claim(s) \_\_\_\_\_ is/are allowed. 6) Claim(s) 1-20 and 26 is/are rejected. 7) Claim(s) is/are objected to. 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement. **Application Papers** 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Applicant may not request that any objection to the drawing(s) be held in abeva 11) The proposed drawing correction filed on \_\_\_\_\_ is: a) approved b) d If approved, corrected drawings are required in reply to this Office action. 12) The oath or declaration is objected to by the Examiner. Priority under 35 U.S.C. §§ 119 and 120 13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § a) ☐ All b) ☐ Some \* c) ☐ None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in A 3. Copies of the certified copies of the priority documents have been application from the International Bureau (PCT Rule 17.2(a)). \* See the attached detailed Office action for a list of the certified copies not 14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application). a) The translation of the foreign language provisional application has been received. 15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121. Attachment(s) 1) Notice of References Cited (PTO-892) Interview Summary (PTO-413) Paper No(s). 2) Notice of Draftsperson's Patent Drawing Review (PTO-948) Notice of Informal Patent Application (PTO-152) 3) Information Disclosure Statement(s) (PTO-1449) Paper No(s)

U.S. Patent and Trademark Office PTO-326 (Rev. 04-01)

1

## **DETAILED ACTION**

New grounds of rejection are contained within this Office Action. Accordingly this action has been made Non-Final.

## Claim Objections

- 1. Claims 9 and 10 are objected to because of the following informalities: Claims 9 and 10 state "the anemometry circuitry interface". However, claim 1 only refers to "an interface". Appropriate correction is required.
- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-3, 5-9, 11, 12, 14-20 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,063,085 to Tay et al. in view of U.S. Patent No. 5,493,906 to Sen-Zhi.

In regards to claims 1-3, 5-9, 11, 12, 14-20 and 26, Tay et al. discloses an elongate member as a needle, in that Tay et al. discloses the probe as a hollow elongated member (Col. 20, lines 12-18), or rod insertable into a body; at least one thermally conductive heating element coupled to the distal portion of the elongate member, the heating element comprising a wire whose electrical resistance changes in response to a change in temperature (Col. 20, lines 45-49). Tay et al. discloses an emometry circuitry and comparing a first resistance and a second resistance of the at least one heating element to indicate a change of conditions related to a distance of penetration of the heating element (Col. 20, lines 48-54). Tay et al. discloses an outer diameter between 0.009

Art Unit: 3736

inches and 0.134 inches (Col. 19, line 56 - Col. 20, line 18). The heating element is less than the thickness of the tissue in which it is inserted. In order to operate the device as disclosed by Tay et al. must include a first and second lead coupled to the at least one heating element. However, Tay et al. fails to disclose the anemometry circuitry comprising the heating element and a variable resistor as resistive circuit element. Nor does Tay et al. disclose an amplifier coupled to the circuit to amplify the voltage difference sensed between the heating element and the variable resistor, and to input the voltage difference back to the circuit to modify the temperature of the heating element such that the heating element assumes a second resistance. Sen-Zhi teaches a constant temperature anemometer (Col. 3, lines 48 – 52) comprising a balanced circuit (Figure 2) having the heating element (64) and a variable resistor (74) as resistive circuit element and an amplifier coupled to the circuit to amplify the voltage difference sensed between the heating element and the variable resistor, and to input the voltage difference back to the circuit to modify the temperature of the heating element such that the heating element assumes a second resistance (Col. 5, line 19 – Col. 6, line 6). It would have been obvious to one having ordinary skill in the art to modify the circuitry as disclosed by Tay et al. to include an interface to the balanced circuit as disclosed by Sin-Zhi to provide a broader frequency bandwidth and a more consisted frequency response (Col. 3, lines 8 – 10). Tay et al. discloses a plurality of heating elements but does not disclose a plurality of anemometry circuits. However, duplicating the components of a prior art device is a design consideration within the skill of the art. In re Harga, 274 F.2d 669, 124 USPQ 378 (CCPA 1960). Tay et al. fails to disclose the heating element being between 0.010 inches and 0.400 inches. However, a change in the size of a prior art device is a design consideration within the skill of the art. In re Rose, 220 F.2d 459, 105 USPQ 237 (CCPA 1955).

Art Unit: 3736

4. Claims 4 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,063,085 to Tay et al. in view of U.S. Patent No. 5,493,906 to Sen-Zhi as applied to claims 2 and 11 above, and further in view of U.S. Patent No. 3,470,604 to Zenick.

In reference to claims 4 and 13, Tay et al. in view of Sen-Zhi discloses a needle, but fails to disclose the needle being formed of stainless steel. However, stainless steel is well known in the medical industry for its strength, durability, ease of sterilization etc. Zenick discloses a hypodermic needle that is formed of stainless steel (Col. 1, line 65). It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the needle as disclosed by Tay et al. in view of Sen-Zhi out of stainless steel as taught by Zenick in order to have a sturdy, durably and easily sterilized hypodermic needle for insertion into a patient.

- 5. Claims 10 and 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,063,085 to Tay et al. in view of U.S. Patent No. 5,493,906 to Sen-Zhi as applied to claims 1 and 11 above, and further in view of U.S. Patent No. 5,873,835 to Hastings et al.
- 6. In regards to claim 18, Tay et al. in view of Sen-Zhi fails to disclose the forming the elongate member of an electrically conductive material and coupling the first end of the heating element to an electrically conductive lead and coupling the second end of the heating element by the elongate member. Hastings et al. teaches a portion of the elongate member being electrically conductive and the anemometry circuitry interface comprising an electrically conductive lead electrically coupled to a first end of the heating element, and the elongate member electrically coupled to a second end of the heating element (Col. 11, lines 33 35). It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the elongate member as disclosed by Tay et al. in view of Sen-Zhi to be an electrically conductive material and coupling the first end of the heating element to an electrically conductive lead and coupling the second end of the heating element by the

Art Unit: 3736

Page 5

connections to the heating element (Col. 11, lines 33 - 35).

Response to Arguments

elongate member as taught by Hastings et al. in order to reduce the resistance of the electrical

7. Applicant's arguments with respect to the claims have been considered but are moot in view

of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Jonathan ML Foreman whose telephone number is (703) 305-5390. The

examiner can normally be reached on Monday - Friday 8:00 am - 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Max Hindenburg can be reached on (703)308-3130. The fax phone numbers for the organization

where this application or proceeding is assigned are (703) 872-9306 for regular communications and

(703) 872-9306 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703) 308-0858.
